PROFESSIONAL SUMMARY

Frontend engineer who loves pushing the boundaries of what's possible in the browser. I specialize in building highly interactive, zero-latency user interfaces using Next.js, React, and raw Vanilla JS. I'm passionate about the details—from managing complex state to writing custom vector physics animations—and I take pride in turning heavy backend logic into fluid, beautiful user experiences.

EDUCATION

Bachelor of Engineering in Computer Engineering

2024 – 2028 (Expected)

LJ Institute of Engineering and Technology (LJIET), Ahmedabad, Gujarat

- Focus on Software Development, Web Technologies, and Interactive Design.

Bachelor of Science in Data Science

2024 – 2026 (Expected)

Indian Institute of Technology Madras (IIT Madras) - Online Degree Program

- Specialization in Data Visualization and Analytics.

TECHNICAL SKILLS

- Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3
- Frameworks & Libraries:** React.js, Next.js (App Router), Vanilla JS
- Styling & Animations:** Tailwind CSS, Framer Motion, GSAP, SVG Vector Physics
- Tools & State Management:** Zustand, Web Audio API, Vercel, Git, Monaco Editor

PROJECT EXPERIENCE

MediBot V2 Frontend

Vanilla JS, Web Audio API, TailwindCSS

- Built a highly dynamic, zero-build-step client interface leveraging the Web Audio API to capture and process live audio streams via AnalyserNodes.
- Engineered real-time biological SVG facial animations driven by live data, mapping complex audio frequencies directly to vector physics at 60 FPS.

Gurukul Classes Platform

Next.js, TypeScript, Framer Motion, Tailwind

- Developed the frontend architecture for an enterprise-scale educational hub using Next.js and TypeScript, ensuring strict type safety and sub-second load times.
- Integrated Pusher for real-time UI updates and utilized Framer Motion to craft fluid, premium micro-animations across complex user flows.

Innov8 Jewels (E-Commerce Web App)

Next.js 14, Zustand, GSAP, Tailwind

- Engineered a luxury e-commerce interface utilizing the Next.js App Router, combining GSAP and Framer Motion to achieve an immersive 60 FPS shopping experience.
- Implemented robust frontend state management utilizing Zustand to seamlessly handle live gold rate pricing and complex shopping cart interactions.

Aeres-IDE UI Workspace

React, Tauri, Monaco Editor

- Built an ultra-fast local developer interface utilizing React to seamlessly wrap the Monaco editor, drastically reducing IDE render latency.
